

TFT BOARD 4 RESISTIVE

TFT Board 4 Resistive is a 4.3" display board which features the standardized 2x20-pin display connector. The display board also integrates a resistive touch panel. The TFT display module supports up to 24-bit pixel format (RGB: 888) and resolution of 480 x 272 pixels. It features an excellent contrast ratio and uniform brightness. TFT Board 4 Resistive, along with other displays from the TFT Board Resistive line of products, is supported by [VisualTFT](#), a software tool for simplified development of visually oriented embedded applications.
