Preface

This document of 'Handling Precautions and Guideline for LIP Rechargeable Batteries shall be applied to the battery cells manufactured by GREPOW.

前言

本文件“聚合物锂离子充电电池操作指示及注意事项”仅适用于深圳市格瑞普电池有限公司生产的电池。

Note(1):

The customer is requested to contact GREPOW in advance, if and when the customer needs other applications or operating conditions than those described in this document. Additional experimentation may be required to verify performance and safety under such conditions.

声明一:

客户若需要将电池用于超出文件规定以外的设备,或在文件规定以外的使用条件下使用电池,应事先联系格瑞普,因为需要进行特定的实验测试以核实电池在该使用条件下的性能及安全性。

Note(2):

GREPOW will take no responsibility for any accident when the cell is used under other conditions than those described in this Document.

声明二:

对于在超出文件规定以外的条件下使用电池而造成的任何意外事故,格瑞普概不负责。

Note(3):

GREPOW will inform, in a written form, the customer of improvement(s) regarding proper use and handing of the cell, if it is deemed necessary.

声明三:

如有必要,格瑞普会以书面形式告之客户有关正确操作使用电池的改进措施。

1. Charging 充电

1.1 Charging current 充电电流:

Charging current should be less than maximum charge current specified in the Product Specification. Charging with higher current than recommended value may cause damage to cell electrical, mechanical and safety performance and could lead to heat generation or leakage.

充电电流不得超过本标准书中规定的最大充电电流。使用高于推荐值电流充电将可能引起电池的充放电性能、机械性能和安全性能的问题,并可能会导致发热或泄漏。

1.2 Charging voltage 充电电压:

Charging shall be done by voltage less than that specified in the Product Specification 4.35V. Charging beyond 4.4V, which is the absolute maximum voltage, must be strictly prohibited. The charger shall be designed to comply with this condition.

It is very dangerous that charging with higher voltage than maximum voltage may cause damage to the cell electrical, mechanical safety performance and could lead to heat generation or leakage.

充电电压不得超过本标准书中规定的额定电压 4.35V。4.4V 为充电电压最高极限，充电器设计应满足此条件。

电芯电压高于额定电压值时，将可能引起电池的充放电性能、机械性能和安全性能的问题，可能会导致发热或泄漏。

1.3 Charging temperature 充电温度:

The battery shall be charged within 10°C~45°C range in the Product Specification.

电池必须在 10°C~45°C 的环境温度范围内进行充电。

1.4 Prohibition of reverse charging 禁止反向充电:

Reverse charging is prohibited. The battery shall be connected correctly. The polarity has to be confirmed before wiring, In case of the battery is connected improperly, the battery cannot be charged. Simultaneously, the reverse charging may cause damaging to the battery which may lead to degradation of battery performance and damage the battery safety, and could cause heat generation or leakage.

正确连接电池的正负极，严禁反向充电。若电池正负极接反，将无法对电池进行充电。同时，反向充电会降低电池的充放电性能、安全性，并会导致发热、泄漏。

2. Discharging 放电

2.1 Discharging current 放电电流

The battery shall be discharged at less than the maximum discharge current specified in the Product Specification.

High discharging current may reduce the discharging capacity significantly or cause over-heat.

放电电流不得超过本标准书规定的最大放电电流，大电流放电会导致电池容量剧减并导致过热。

2.2 Discharging temperature 放电温度

The battery discharge temperature is -20~60°C, 5~45°C environment suggested when Discharge with large current, small current discharge suggested under <5°C or >45°C, Discharged under too low or too high temperature could lead to battery failure or other conditions.

电池放电环境温度为-20~60°C。大电流放电建议在 5~45°C 环境下进行，<5°C 或 >45°C 建议用小电流进行放电，过低或过高温度大电流放电将可能导致电池失效或出现其他状况。

2.3 Over-discharging 过放电:

It should be noted that the battery would be at over-discharged state by its self-discharge characteristics in case the cell is not used for long time. In order to prevent over-discharging, the battery shall be charged periodically to maintain between 3.6V and 3.9V.

Over-discharging may causes loss of cell performance, characteristics, or battery functions.

The charger shall be equipped with a device to prevent further discharging exceeding a cut-off voyage specified in the Product Specification. Also the charger shall be equipped with a device to control the recharging procedures as follows:

The battery pack shall start with a low current (0.01C) for 15-30 minutes, i.e.-charging, before rapid charging starts. The rapid charging shall be started after the (individual) cell voltage has been reached above 3.6V within 15-30 minutes that can be determined with the use of an appropriate timer for

pre-charging. In case the (individual) cell voltage does not rise to 3.0V within the pre-charging time, then the charger shall have functions to stop further charging and display the cell/pack is at abnormal state.

需要注意的是，在电池长期未使用期间，它可能会用其它自放电特性而处于某种过放电状态。为防止放电的发生，电池应定期充电，将其电压维持在 3.6V 至 3.9V 之间。

过放电会导致电池性能、电池功能的丧失。

充电器应有装置来防止电池放电至低于本标准书规定的截止电压。此外，充电器还应有装置以防止重复充电，步骤如下：

电池在快速充电之前，应先以一小电流 (0.01C) 预充电 15~30 分钟，以使 (每个) 电芯的电压达到 3.0V 以上，再进行快速充电。可用一记时器来实现该预充电步骤。如果在预充电规定时间内，(个别) 电池的电压仍未升到 3.0V 以上，充电器应能够停止下一步快速充电，并显示该/电池正处于非正常状态。

The soft aluminum packing foil is very easily damaged by sharp edge parts such as Ni-tabs, pins and needles.

- Don't strike battery with any sharp edge parts
- Trim your nail or wear glove before taking battery
- Clean worktable to make sure no any sharp particle

铝箔包装材料易被尖锐部件损伤，诸如镍片，尖针。

- 禁止用尖锐部件碰撞电池；
- 取放电池时，请修短指甲或戴上手套；
- 应清洁工作环境，避免有尖锐物体存在

4.2 Folding edge 折边

The folding edge is form in battery process and passed all hermetic test

- Don't open or deform folding edge

折边在电池生产过程中已完成，并通过了密封测试。

- 禁止打开或破坏折边。

4.3 Mechanical shock 机械撞击

·Don't Fall, hit, bend battery body

·禁止坠落、冲击、弯折电池。

4.4 The curvature of the curve battery was prohibited to change or damage when handled, or the performance of the battery will be declined or the function will be lose.

·在使用弧形电池的过程中，不可改变或损坏电池的形状，否则会使电池的性能下降或完全丧失。

5. Notice Designing Battery Pack 电池外壳设计注意事项

5.1 Pack design 外壳设计

·Battery pack should have sufficient strength and battery should be protected from mechanical hock

·No Sharp edge components should be inside the pack containing the battery.

·电池外壳应有足够的机械强度以保证其内部电芯免受机械撞击。

·外壳内安装电芯的部位不应有锋利的边角。

6. Notice for Assembling Battery Pack 电池与外壳组装注意事项

6.1 Cell fixing 电池的安装

·The battery should be fixed to the battery pack by its large surface area.

·No cell movement in the battery pack should be allowed.

·应将电池的宽面安装在外壳内；

·电池不得在壳内活动。

7. Others 其它事项

7.1 Prevention of short circuit within a battery pack 电池短路预防

Enough insulation layers between wiring and the cells shall be used to maintain extra safety protection.

线与电芯之间需要做充分绝缘，保持电池安全

7.2 Prohibition of disassembling 严禁拆卸电池

1) Never disassemble the cells 在任何情况下不得拆卸电池

The disassembling may generate internal short circuit in the cell, which may cause gassing, firing, or other problems.

拆卸电池可能会导致内部短路，进而引起鼓气、着火及其它问题。

2) Electrolyte is harmful 电解液有害

LIP battery should not have liquid from electrolyte flowing, but in case the electrolyte come into contact with the skin, or eyes, physicians shall flush the electrolyte immediately with fresh water and medical advice is to be sought.

聚合物锂电池理论上不存在流动的电解液，但万一有电解液泄漏而接触到皮肤、眼睛或身体其它部位，应立即用清水冲洗电解液并就医。

7.3 Prohibition of dumping of cells into fire 严禁将电池投入火中

Never incinerate nor dispose the cells in fire. These may cause firing of the cells, which is very dangerous and is prohibited.

在任何情况下，不得燃烧电池或将电池投入火中，否则会引起电芯燃烧，这是非常危险的，应绝对禁止。

7.4 Prohibition of cells immersion into liquid such as water 严禁将电池浸入液体，如水

The cells shall never be soaked with liquids such as water, seawater drinks such as soft drinks, juices coffee or others.

不得将电池浸泡液体，如淡水、海水、饮料（果汁、咖啡等）。

7.5 Battery cells replacement 电芯的更换

The battery replacement shall be done only by either cells supplier or device supplier and never be done by the user.

更换电芯应由电芯供应商或设备供应商完成，用户不得自行更换。

7.6 Prohibition of use of damaged cells 禁止使用已损坏的电池

The cells might be damaged during shipping by shock. If any abnormal features of the cells are found such as damages in a plastic envelop of the cell, deformation of the cell package, smelling of electrolyte, electrolyte leakage and others, the cells shall never be used any more.

The cells with a smell of the electrolyte or a leakage shall be placed away from fire to avoid firing.

7.7 Other Chemical Reaction 其它的化学反应

Because batteries utilize a chemical reaction, battery performance will deteriorate over time even if stored for a long period of time without being used. In addition, if the various usage conditions such as charge, discharge, ambient temperature, etc. are not maintained within the specified ranges the life expectancy of the battery may be shortened or the device in which the battery is used may be damaged by electrolyte leakage. If the batteries cannot maintain a charge for long periods of time, even when they are charged correctly, this may indicate it is time to change the battery.

电池是利用化学反应产生电量，电池性能会随时间变差，即使电池长时间储存而不使用。另外，各种各样的使用方法，像充电、放电及环境温度，等等不能在本规格书规定的范围时的情形，会减小电池的期望寿命，或者会使仪器设备由于电池漏液而损坏。即使充电正确，电池长时间不能再充电，那就要更换电池了。

7.8 Note: Any other items which are not covered in this specification shall be agreed by both parties

注意：任何本产品规格书未包含的其它条款，应由双方协议确定。
