

Bridgelux® V6 HD Thrive™ Array

Product Data Sheet DS406

Introduction

Bridgelux Thrive™ combines unique chip, phosphor and packaging technology to closely match the spectra of natural light over the visible wavelength range. Thrive can be used in constant color point luminaires to bring full spectrum natural light indoors or in tunable white luminaires to incorporate circadian elements that may impact human well-being. The high fidelity spectral output of Thrive creates stunning environments with excellent color rendering and outstanding TM30 metrics. Thrive is available in both SMD components and LED arrays to enable a broad range of lighting applications including retail, hospitality, office, education, architectural, museums, healthcare and residential lighting.

- · Engineered spectrum to closely match natural light
- CRI >95, R1-R15 >90, high Rf and Rg values
- · High efficacy full spectrum solution
- No violet chip augmentation
- · Hot color targeted
- Form factor consistent with existing Bridgelux COB arrays
- Broad product platform availability (SMDs and COBs)

Benefits

- Full consistent spectrum with fewer spectral spikes
- · Natural and vivid color rendering
- · Greater energy savings, lower utility costs
- · Economical, high efficiency solution
- Uniform and consistent white light at application conditions
- · Ease of design and rapid go-to-market
- Enables greater design flexibility and platform color consistency

Product Feature Map

Bridgelux arrays are fully engineered devices that provide consistent thermal and optical performance on an engineered mechanical platform. The V Series HD arrays are the most compact chip-on-board devices across all of Bridgelux's LED Array products. The arrays incorporate several features to simplify design integration and assembly. Please visit www.bridgelux.com for more information on the V Series HD family of products.

Note: Part number and lot codes are scribed on back of array

Product Selection Guide

The following product configurations are available:

Table 1: Selection Guide, Pulsed Measurement Data (T_= 25°C)

| Part Number¹ ⁶ | Nominal CCT ¹ (K) | CRI ² | Nominal Drive Current³ (mA) | Typical V _f (V) | Typical Pulsed Flux ^{45.67} T _c = 25°C (lm) | Minimum Pulsed Flux ^{67,8} T _c = 25°C (lm) | Typical Power (W) | Typical Efficacy (lm/W) |

- Product CCT is hot targeted at T_j= 85°C. Nominal CCT as defined by ANSI C78 377-2011.

 All CRI values are measured at T_j = T_c = 25°C. CRI values are typical values. Minimum CRI for Thrive products is 95. Bridgelux maintains a ± 3 tolerance on CRI values. Drive current is referred to as nominal drive current.

- Drive current is referred to as nominal drive current.
 Products tested under pulsed condition (10ms pulse width) at nominal test current where T_j (junction temperature) = T_c (case temperature) = 25°C. Typical stabilized DC performance values are provided as a reference only and are not a guarantee of performance.
 Typical performance values are provided as a reference only and are not a guarantee of performance.
 Typical performance is estimated based on operation under DC (direct current) with LED array mounted onto a heat sink with thermal interface material and the case temperature maintained at 85°C. Based on Bridgelux test setup, values may vary depending on the thermal design of the luminaire and/or the exposed environment to which the product is subjected.
 Bridgelux maintains a ±7% tolerance on flux measurements.
 Minimum flux values at the nominal test current are guaranteed by 100% test.
 Minimum flux values at elevated temperatures are provided for reference only and are not guaranteed by 100% production testing. Based on Bridgelux test setup, values may vary depending on the thermal design of the luminaire and/or the exposed environment to which the product is subjected.

values may vary depending on the thermal design of the luminaire and/or the exposed environment to which the product is subjected.

Performance at Commonly Used Drive Currents

V Series HD Thrive LED arrays are tested to the specifications shown using the nominal drive currents in Table 1. V Series HD Thrive LED Arrays may also be driven at other drive currents dependent on specific application design requirements. The performance at any drive current can be derived from the current vs. voltage characteristics shown in Figures 10 & 11 and the flux vs. current characteristics shown in Figures 12 & 13. The performance at commonly used drive currents is summarized in Table 3.

Table 3: Product Performance at Commonly Used Drive Currents

| Part Number | CRI | Drive Current¹ (mA) | Typical V _f T _c = 25°C (V) | Typical Power T _c = 25°C (W) | Typical Flux² T _c = 25°C (lm) | Typical DC Flux³ T _c = 85°C (lm) | Typical Efficacy T _c = 25°C (lm/W) |

Spectral Matching to Natural Light

The lighting market is in the early stages of adoption of human-centric lighting (HCL). HCL encompasses the effects of lighting on the physical and emotional health and well-being of people. Throughout evolution, the human visual system has evolved under the natural light of sun and fire. These light sources have standardized industry spectral power definitions that describe the state of natural light. However, conventional metrics such as CCT, CRI, and TM-30 fail to adequately quantify the naturalness, or closeness of these light sources to the standardized natural spectra. Due to a lack of an industry standard metric to quantitatively measure the naturalness of a light source, Bridgelux has pioneered a new metric that takes the guesswork out of comparing LED light sources to natural light.

Average Spectral Difference, or ASD, is calculated by measuring the absolute difference between two spectra at discrete wavelengths. These values are averaged across a wavelength range derived from the photopic response curve, or V0; a luminous efficiency function describing the average spectral sensitivity of human perception of brightness. The range of 425nm to 690nm was selected to remove the tails of the V0 gaussian distribution below 1% of the peak value at 555nm, covering 99.9% of the area under the photopic response curve. Natural light is defined following the approach of IES TM-30; black body curves for light sources of \$4000K and the CIE standard illuminant D for light sources of \$5000K.

Natural light has an ASD of 0%; lower ASD values indicate a closer match to natural light. Thrive is engineered to provide the closest match to natural light available using proprietary chip, phosphor and packaging technology, resulting in an ASD between 8% to 10% for all CCTs. By comparison, standard 80, 90, and 98 CRI light sources have ASD values that are 100% to 300% larger than Thrive. To learn more about the ASD metric, please review the Bridgelux whitepaper: Average Spectral Difference, a new method to make objective comparisons of naturalness between light sources; or contact your Bridgelux sales representative.

| BXRH-xxx100x-G-73 | 700 | 17.0 | 18.2 | 19.6 | -8.1 | 0.36 | 16.4 | 20.1 |
| | 960 | 17.6 | 18.7 | 20.2 | -8.1 | 0.39 | 16.9 | 20.8 |

Notes for Table 5:

- 1. Parts are tested in pulsed conditions, T_c = 25°C. Pulse width is 10ms.
- 2. Voltage minimum and maximum are provided for reference only and are not a guarantee of performance.
- 3. Bridgelux maintains a tester tolerance of \pm 0.10V on forward voltage measurements.
- 4. Typical coefficient of forward voltage tolerance is \pm 0.1mV for nominal current.
- 5. Thermal resistance values are based from test data of a 3000K 80 CRI product.
- 6. Thermal resistance value was calculated using total electrical input power; optical power was not subtracted from input power. The thermal interface material used during testing is not included in the thermal resistance value.
- 7. V, min hot and max cold values are provided as reference only and are not guaranteed by test. These values are provided to aid in driver design and selection over the operating range of the product.
- 8. This product has been designed and manufactured per IEC 62031:2014. This product has passed dielectric withstand voltage testing at 500 V. The working voltage designated for the insulation is 50V d.c. The maximum allowable voltage across the array must be determined in the end product application.

Absolute Maximum Ratings

Table 6: Maximum Ratings

| Parameter | Maximum Rating | | | | |
|--|---|-------------------|--|--|--|
| LED Junction Temperature (T _j) | 125°C | | | | |
| Storage Temperature | -40°C to |) +105°C | | | |
| Operating Case Temperature¹ (T _c) | 10(| 5°C | | | |
| Soldering Temperature ² | 300°C or lower for a maximum of 6 seconds | | | | |
| | BXRH-xxx100x-B-7x | BXRH-xxx100x-G-7x | | | |
| Maximum Drive Current ³ | 480mA | g6omA | | | |
| Maximum Peak Pulsed Drive Current ⁴ | 68omA | 1360mA | | | |
| Maximum Reverse Voltage⁵ | -60V | -35V | | | |

Notes for Table 6:

- 1. For IEC 62717 requirement, please consult your Bridgelux sales representative.
- 2. Refer to Bridgelux Application Note AN101: Handling and Assembly of Bridgelux V Series LED Arrays.
- 3. Arrays may be driven at higher currents however lumen maintenance may be reduced, and product warranty will be void.
- 4. Bridgelux recommends a maximum duty cycle of 10% and pulse width of 20 ms when operating LED Arrays at maximum peak pulsed current specified. Maximum peak pulsed currents indicate values where LED Arrays can be driven without catastrophic failures.
- 5. Light emitting diodes are not designed to be driven in reverse voltage and will not produce light under this condition. Maximum rating provided for reference only.

Eye Safety

Table 7: Eye Safety Risk Group (RG) Classifications

| Part Number | Drive Current ³ | cc | T13 |
|--|-------------------------------|-------------|--------|
| Fait Nullibei | (mA) | 2700K/3000K | 4000K² |
| DVDI I I I I I I I I I I I I I I I I I I | 350 | RG1 | RG2 |
| BXRH-xxx100x-B-73 | 480 | RG1 | RG2 |
| DVDI Lynn 100 V C 70 | 700 | RG1 | RG2 |
| BXRH-xxx100x-G-73 | 960 | RG1 | RG2 |

Notes for Table 7:

- 1. Eye safety classification for the use of Bridgelux V Series HD LED arrays is in accordance with specification IEC/TR 62778: Application of IEC 62471 for the assessment of blue light hazard to light sources and luminaires.
- 2. For products classified as RG2 at 4000K, $E_{\rm thr}$ = 1760 kx.
- 3. Please contact your Bridgelux sales representative for E_{thr} values at specific drive currents and CCTs not listed.

Product Bin Definitions

Table 8: 2-, 3- and 4-step MacAdam Ellipse Color Bin Definitions

| | Center Point | | Degree | 2-step | | 3-s | tep | 4-step | |
|-------|--------------|--------|--------|---------|---------|--------|--------|--------|--------|
| ССТ | × | У | (°) | а | b | а | b | а | b |
| 2700K | 0.4578 | 0.4101 | 53.700 | 0.00540 | 0.00280 | 0.0081 | 0.0042 | N/A | N/A |
| 3000K | 0.4338 | 0.403 | 53.217 | 0.00556 | 0.00272 | 0.0083 | 0.0041 | N/A | N/A |
| 4000K | 0.3818 | 0.3797 | 53.717 | 0.00626 | 0.00268 | 0.0094 | 0.0040 | N/A | N/A |
| 5000K | 0.3447 | 0.3553 | 59.617 | N/A | N/A | 0.0082 | 0.0035 | 0.0110 | 0.0047 |
| 5700K | 0.3287 | 0.3417 | 59.060 | N/A | N/A | 0.0074 | 0.0032 | 0.0099 | 0.0042 |
| 6500K | 0.3123 | 0.3282 | 58.567 | N/A | N/A | 0.0066 | 0.0028 | 0.0090 | 0.0038 |

Notes for Table 8:

Figure 9: C.I.E. 1931 Chromaticity Diagram (Color targeted at T_c=85°C)

^{1.} Color binning at T_c=85°C

^{2.} Bridgelux maintains a tolerance of \pm 0.007 on x and y color coordinates in the CIE 1931 color space.

Performance Curves

Figure 10: Drive Current vs. Voltage V6B HD²

Figure 12: Typical Relative Flux vs. Current V6B HD^{1,2}

Figure 11: Drive Current vs. Voltage V6G HD²

Figure 13: Typical Relative Flux vs. Current V6G HD^{1,2}

Performance Curves

Figure 14: Typical DC Flux vs. Case Temperature

Figure 15: Typical ccx Shift vs. Case Temperature

Figure 16: Typical ccy Shift vs. Case Temperature

Notes for Figures 14-16:

- 1. Bridgelux does not recommend driving high power LEDs at low currents. Doing so may produce unpredictable results. Pulse width modulation (PWM) is recommended for dimming effects.
- 2. Characteristics shown for warm white based on 3000K Thrive
- 3. Characteristics shown for neutral white based on 4000K Thrive
- 4. Characteristics shown for cool white based on 5000K Thrive
- 5. For other color SKUs, the shift in color will vary. Please contact your Bridgelux Sales Representative for more information.

Typical Radiation Pattern

Figure 17: Typical Spatial Radiation Pattern

Notes for Figure 17:

- 1. Typical viewing angle is 120°.
- 2. The viewing angle is defined as the off axis angle from the centerline where intensity is $\frac{1}{2}$ of the peak value.

Figure 18: Typical Polar Radiation Pattern

Mechanical Dimensions

Figure 19: V6 HD LED Array

Notes for Figure 16:

- 1. Drawings are not to scale.
- 2. Drawing dimensions are in millimeters.
- 3. Unless otherwise specified, tolerances are $\pm 0.1 \text{mm}$.
- 4. Solder pad labeled "+" denotes positive contact.
- 5. Refer to Application Notes AN101 for product handling, mounting and heat sink recommendations.
- 6. The optical center of the LED Array is nominally defined by the mechanical center of the array to a tolerance of ± 0.2mm.
- 7. Bridgelux maintains a flatness of 0.10mm across the mounting surface of the array.

Packaging and Labeling

Figure 20: V6 HD Packaging

Notes for Figure 20:

- 1. Each tube holds 35 V6 HD COB arrays.
- 2. One tube is sealed in an anti-static bag. Four bags are placed in a shipping box. Depending on quantities ordered, a bigger shipping box, containing four boxes may be used to ship products.
- 3. Each bag and box is to be labeled as shown above.
- 4. Dimensions for each tube are 15.4 (W) \times 8.3 (H) \times 430 (L) mm. Dimensions for the anti-static bag are 75 (W) \times 615 (L) \times 0.075 (T) mm. Dimensions for the shipping box are 58.7 \times 13.3 \times 7.9 cm

Packaging and Labeling

Figure 21: Product Labeling

Bridgelux COB arrays have laser markings on the back side of the substrate to help with product identification. In addition to the product identification markings, Bridgelux COB arrays also contain markings for internal Bridgelux manufacturing use only. The image below shows which markings are for customer use and which ones are for Bridgelux internal use only. The Bridgelux internal manufacturing markings are subject to change without notice, however these will not impact the form, function or performance of the COB array.

Design Resources

Application Notes

Bridgelux has developed a comprehensive set of application notes and design resources to assist customers in successfully designing with the V Series HD product family of LED array products. For all available application notes visit www.bridgelux.com.

Optical Source Models

Optical source models and ray set files are available for all Bridgelux products. For a list of available formats, visit www.bridgelux.com.

Precautions

3D CAD Models

Three dimensional CAD models depicting the product outline of all Bridgelux V Series HD LED arrays are available in both IGS and STEP formats. Please contact your Bridgelux sales representative for assistance.

LM80

LM80 testing has been completed and the LM80 report is now available. Please contact your Bridgelux sales representative for LM-80 report.

CAUTION: CHEMICAL EXPOSURE HAZARD

Exposure to some chemicals commonly used in luminaire manufacturing and assembly can cause damage to the LED array. Please consult Bridgelux Application Note AN101 for additional information.

CAUTION: RISK OF BURN

Do not touch the V Series HD LED array during operation. Allow the array to cool for a sufficient period of time before handling. The V Series HD LED array may reach elevated temperatures such that could burn skin when touched.

CAUTION

CONTACT WITH LIGHT EMITTING SURFACE (LES)

Avoid any contact with the LES. Do not touch the LES of the LED array or apply stress to the LES (yellow phosphor resin area). Contact may cause damage to the LED array.

Optics and reflectors must not be mounted in contact with the LES (yellow phosphor resin area).

Disclaimers

MINOR PRODUCT CHANGE POLICY

The rigorous qualification testing on products offered by Bridgelux provides performance assurance. Slight cosmetic changes that do not affect form, fit, or function may occur as Bridgelux continues product optimization.

STANDARD TEST CONDITIONS

Unless otherwise stated, array testing is performed at the nominal drive current.

About Bridgelux: Bridging Light and Life™

At Bridgelux, we help companies, industries and people experience the power and possibility of light. Since 2002, we've designed LED solutions that are high performing, energy efficient, cost effective and easy to integrate. Our focus is on light's impact on human behavior, delivering products that create better environments, experiences and returns—both experiential and financial. And our patented technology drives new platforms for commercial and industrial luminaires.
