## Notification about the transfer of the semiconductor business

The semiconductor business of Panasonic Corporation was transferred on September 1, 2020 to Nuvoton Technology Corporation (hereinafter referred to as "Nuvoton"). Accordingly, Panasonic Semiconductor Solutions Co., Ltd. became under the umbrella of the Nuvoton Group, with the new name of Nuvoton Technology Corporation Japan (hereinafter referred to as "NTCJ").

In accordance with this transfer, semiconductor products will be handled as NTCJ-made products after September 1, 2020. However, such products will be continuously sold through Panasonic Corporation.

Publisher of this Document is NTCJ.
If you would find description "Panasonic" or "Panasonic semiconductor solutions", please replace it with NTCJ.
※ Except below description page
"Request for your special attention and precautions in using the technical information and semiconductors described in this book"

## 4 x 4 Dots Matrix LED Driver IC

## FEATURES

- $4 \times 4$ LED Matrix Driver (Total LED that can be driven = 16)
- LED Selectable Maximum Current
- LED Music Synchronizing Function
- ${ }^{2}$ C interface (Standard Mode, Fast Mode and Fast Mode Plus) (4 Slave address selectable)
- 16 pin Plastic Quad Flat Non-leaded Package (QFN Type)

## DESCRIPTION

AN32180A is a 16 Dots Matrix LED Driver. It can drive up to 4 channels of RGB LEDs.

## APPLICATIONS

- Mobile, Wearable
- Smart Speaker
- PCs
- Game Consoles
- Home Appliances etc.

## TYPICAL APPLICATION

Note)
This application circuit is an example. The operation of the mass production set is not guaranteed. Customers shall perform enough evaluation and verification on the design of mass production set. Customers shall be fully responsible for the incorporation of the above application circuit and information in the design of the equipment.

## ABSOLUTE MAXIMUM RATINGS

| Parameter | Symbol | Rating | Unit | Note |
| :--- | :---: | :---: | :---: | :---: |
| Supply voltage | $\mathrm{VCC}_{\mathrm{MAX}}$ | 6.0 | V | ${ }^{* 1}$ |
|  | $\mathrm{VDD}_{\text {MAX }}$ | 6.0 | V | ${ }^{* 1}$ |
| Operating ambience temperature | $\mathrm{T}_{\text {opr }}$ | -30 to +85 | ${ }^{\circ} \mathrm{C}$ | ${ }^{* 2}$ |
| Operating junction temperature | $\mathrm{T}_{\mathrm{j}}$ | -30 to +125 | ${ }^{\circ} \mathrm{C}$ | ${ }^{* 2}$ |
| Storage temperature | $\mathrm{T}_{\text {stg }}$ | -55 to +125 | ${ }^{\circ} \mathrm{C}$ | ${ }^{* 2}$ |
| Input Voltage Range | SLAVSEL, SCL, SDA, <br> CLKIO, NRST | -0.3 to 6.0 | V | - |
| Output Voltage Range | IREF, LDO, CLKIO, <br> Z1, Z2, Z3, Z4, Z5 | -0.3 to 6.0 | V | - |
| ESD | HBM | 2.0 | kV | - |

Note) This product may sustain permanent damage if subjected to conditions higher than the above stated absolute maximum rating. This rating is the maximum rating and device operating at this range is not guaranteeable as it is higher than our stated recommended operating range. When subjected under the absolute maximum rating for a long time, the reliability of the product may be affected.
*1: $\mathrm{VCC}_{\mathrm{MAX}}=\mathrm{VCC}, \mathrm{VDD}_{\mathrm{MAX}}=\mathrm{VDD}$.
The values under the condition not exceeding the above absolute maximum ratings and the power dissipation.
*2: Except for operating ambient temperature, operating junction temperature and storage temperature,
all ratings are for $\mathrm{Ta}=25^{\circ} \mathrm{C}$.

POWER DISSIPATION RATING

| PACKAGE | $\theta_{J A}$ | $\mathbf{P}_{\mathrm{D}}\left(\mathbf{T a}=\mathbf{2 5}{ }^{\circ} \mathbf{C}\right)$ | $\mathbf{P}_{\mathrm{D}}\left(\mathbf{T a}=85^{\circ} \mathbf{C}\right)$ |
| :---: | :---: | :---: | :---: |
| 16 pin Plastic Quad Flat Non-leaded package (QFN Type) | $189.2^{\circ} \mathrm{C} / \mathrm{W}$ | 0.529 W | 0.212 W |

Note) For the actual usage, please refer to the $P_{D}-$ Ta characteristics diagram in the package specification, follow the power supply voltage, load and ambient temperature conditions to ensure that there is enough margin and the thermal design does not exceed the allowable value.

## CAUTION

Although this IC has built-in ESD protection circuit, it may still sustain permanent damage if not handled properly. Therefore, proper ESD precautions are recommended to avoid electrostatic damage to the MOS gates

Revision. 4

RECOMMENDED OPERATING CONDITIONS

| Parameter | Symbol | Min. | Typ. | Max. | Unit | Note |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Supply voltage range | VCC | 3.1 | 5.0 | 5.5 | V | - |
|  | VDD | 1.7 | 5.0 | 5.5 | V | - |
| Input Voltage Range | SLAVSEL, SCL, SDA, CLKIO | -0.3 | - | VDD + 0.3 | V | *1 |
|  | NRST | -0.3 | - | VCC + 0.3 | V | *1 |
| Output Voltage Range | IREF, LDO, CLKIO, Z1, Z2, Z3, Z4, Z5 | -0.3 | - | VCC + 0.3 | V | *1 |

Note) Voltage values, unless otherwise specified, are with respect to GND. GND is voltage for GND. VCC is voltage for VCC. VDD is voltage for VDD.
Do not apply external currents or voltages to any pin not specifically mentioned.
*1: (VCC + 0.3) V must not exceed 6 V . (VDD + 0.3) V must not exceed 6 V .

| Input current each I/O pin | $I_{i}$ | $\begin{aligned} & \mathrm{VCC}=5.5 \mathrm{~V}, \mathrm{VDD}=5.5 \mathrm{~V} \\ & \mathrm{~V}_{\mathrm{SCL}}, \mathrm{~V}_{\mathrm{SDA}}=0.1 \mathrm{VDD}_{\mathrm{MAX}} \text { to } 0.9 \\ & \mathrm{VDD}_{\mathrm{MAX}} \end{aligned}$ | - 10 | 0 | 10 | $\mu \mathrm{A}$ | - |
| SCL clock frequency | $\mathrm{f}_{\text {SCL }}$ | - | 0 | - | 1000 | kHz | - |

Note) $\mathrm{VDD}_{\max }$ refers to the maximum operating supply voltage of VDD.
*2 : The input threshold voltage of $I^{2} \mathrm{C}$ bus (Vth) is linked to VDD $\left(I^{2} \mathrm{C}\right.$ bus $\mathrm{I} / \mathrm{O}$ stage supply voltage).
In case the pull-up voltage is not VDD, the threshold voltage (Vth) is fixed to ((VDD / 2) $\pm$ (Schmitt width) / 2 ) and High-level, Low-level of input voltage are not specified.
In this case, pay attention to Low-level (max.) value ( $\mathrm{V}_{\text {ILMaX }}$ ).
It is recommended that the pull-up voltage of $I^{2} \mathrm{C}$ bus is set to the $I^{2} \mathrm{C}$ bus I/O stage supply voltage (VDD).

Note) "Reserved" registers and data bits indicated by "--" cannot be accessed. "Reserved" registers are not used.
For data bits indicated by "--" in other registers except for "reversed" registers, will return "zero" value if these bits are read.
Writing to these bits will be ignored. IMAX Reserved will give default value [1].

OPERATION ( continued)

## 3. Register map Detailed Explanation

| Register Name |  | RST |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Address | R/W | D7 | D6 | D5 | D4 | D3 | D2 | D1 | D0 |  |
| 01h | R/W | -- | -- | -- | -- | -- | -- | RAMRST | SRST |  |
| Default | $00 h$ | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |  |

D1 : RAMRST RAM reset
[0] : RAM can be overwritten (default)
[1] : Clear all PWM duty setting and intensity setting
D0 : SRST Soft reset control
[0] : Reset release state (default)
[1]: Reset reset

- This register will auto-return to zero when written with "High" logic value.

| Register Name |  | POWERCNT |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Address | R/W | D7 | D6 | D5 | D4 | D3 | D2 | D1 | D0 |  |
| 02h | R/W | -- | -- | -- | -- | -- | -- | -- | OSCEN |  |
| Default | $00 h$ | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |  |

DO : OSCEN Internal oscillator ON/OFF bit
[0] : Internal oscillator OFF (default)
[1] : Internal oscillator ON

- Oscillator will auto turn ON if any of the LED drivers are enabled ( $M T X O N=1$ ) even if this bit is [0].

## OPERATION ( continued )

## 3. Register map Detailed Explanation (continued)

| Register Name |  | OPTION |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Address | R/W | D7 | D6 | D5 | D4 | D3 | D2 | D1 | D0 |  |
| 04h | R/W | -- | -- | -- | -- | ZPDEN | MLDACT | CLKOUT | EXTCLK |  |
| Default | 00 h | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 |  |

D3 : ZPDEN Ghost Image Prevention Enable
[0] : Turn off ghost image prevention (default)
[1] : Turn on ghost image prevention
D2 : MLDACT External Melody Input Selection
[0] : Turn off melody mode (default)
[1] : Turn on melody mode
D1 : CLKOUT Internal clock output enable
[0] : Internal clock is not output from CLKOUT (default)
[1] : Internal clock is output from CLKOUT
D0 : EXTCLK Internal/external synchronous clock selection
[0] : Internal clock operation (default)
[1] : External clock operation

- Ghost Image Prevention may not remove the ghost image perfectly. It depends on the LED color combination and LED connection method. Please refer to Page. 46 for details.
Please refer to Page. 47 for details especially when this IC is used for RGB driver.
- For D2, D1 and D0 cannot be set to High at the same time. In such case, the priority of operation will be EXTCLK then CLKOUT and then Melody Mode will have the least priority.

| Register Name |  | MTXON |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Address | R/W | D7 | D6 | D5 | D4 | D3 | D2 | D1 | D0 |  |
| 05h | R/W | -- | -- | -- | IMAX <br> Reserved |  | IMAX[2:0] |  | MTXON |  |
| Default | 1Eh | 0 | 0 | 0 | 1 | 1 | 1 | 1 | 0 |  |

D3-1 : IMAX Maximum current setup selection

| $[000]: 7.5 \mathrm{~mA}$ | $[100]: 37.5 \mathrm{~mA}$ |
| :--- | :--- |
| $[001]: 15 \mathrm{~mA}$ | $[101]: 45 \mathrm{~mA}$ |
| $[010]: 22.5 \mathrm{~mA}$ | $[110]: 52.5 \mathrm{~mA}$ |
| $[011]: 30 \mathrm{~mA}$ | $[111]: 60 \mathrm{~mA}$ (default) |

DO : MTXON LED Matrix Set up ON/OFF control
[0] : OFF (default)
[1]: ON

- For better accuracy, it is advisable to set IMAX at $30 \mathrm{~mA}(\mathrm{IMAX}=011)$. The brightness can be adjusted lower by using brightness register (BRT*[3:0] (register \#20h to \#2Fh)) or PWM register (DT*[7:0] (register \#10h to \#1Fh)).

## OPERATION ( continued )

## 5. $I^{2} \mathrm{C}$ Bus Interface

### 5.1 Basic Rules

- This IC, $I^{2}$ C-bus, is designed to correspond to the Standard-mode (100 kbps), Fast-mode(400 kbps) and Fast-mode plus ( 1000 kbps ) devices in the version 2.1 of NXP's specification. However, it does not correspond to the $\mathrm{H}_{\mathrm{s}}$-mode (to 3.4 Mbps ).
- This IC will operate as a slave device in the $I^{2} \mathrm{C}$-bus system. This IC will not operate as a master device.
- The program operation check of this IC has not been conducted on the multi-master bus system and the mix-speed bus system, yet. The connected confirmation of this IC to the CBUS receiver also has not been checked. Please confirm with our company if it will be used in these mode systems.
- The $\mathrm{I}^{2} \mathrm{C}$ is the brand of NXP.

### 5.2 START and STOP conditions

When SDA signal changes from "High" to "Low" while SCL is "High" will trigger START condition. Whereas, STOP condition will be triggered when SDA signal changes from "Low" to "High" while SCL is "High". START condition and STOP condition are always formed by the master. After the START condition occurs, the bus becomes busy state. After STOP condition occurs, the bus becomes free again.

### 5.3 Data Transfer

Length of each byte output to SDA line is always 8 bits. There is no limitation in the number of bytes that can be transmitted at 1 time. Many bytes can be sent. The acknowledge bit is necessary for each byte.
Data is sequentially transmitted from most significant bit (MSB).

Doc No. TA4-EA-05357
Revision. 4

## OPERATION ( continued )

## 5. $I^{2} \mathrm{C}$ Bus Interface (continued)

## $5.4 \mathrm{I}^{2} \mathrm{C}$ Interface - Data Format

In this IC, 4 different Slave address can be changed by selecting SLAVSEL ( "Low" or "High" or "SCL" or "SDI"). The slave addresses of this IC are as follow:

| SLAVSEL | Slave address |
| :---: | :---: |
| Low | 1010000 X |
| High | 1010001 X |
| SCL | 1010010 X |
| SDI | 1010011 X |

## Write mode

Sub address is not incremented automatically.
The next data byte is written in the same Sub address by transmitting data byte continuously.

## Write mode (Auto increment mode)

Data byte can be written in Sub address by transmitting data byte continuously.
Sub address is incremented automatically.

$\square$ Data transmission from Master
$\square$ Data transmission from Slave

Doc No. TA4-EA-05357
Revision. 4

## Panasonic

## OPERATION ( continued )

## 5. $I^{2} \mathrm{C}$ Bus Interface (continued)

## $5.41^{2} \mathrm{C}$ Interface - Data Format (continued)

Read mode (in case Sub address is not specified)
When Sub address 8 bit is not specified and data is read, this IC allows to read the value of adjacent Sub address specified in the last Write mode.
The next data byte reads the same Sub address by transmitting data byte continuously.

Read mode (in case Sub address is specified)
Sub address is not incremented automatically.
The next data byte reads the same Sub address by transmitting data byte continuously.

Read mode (Auto increment mode)
It is possible to read data byte in continuous Sub address by transmitting data byte continuously.
Sub address is incremented automatically.

## 7. Block Configuration of Matrix LED

### 7.1 Matrix LED descriptions, Matrix LED's numbers

LED matrix driver circuit individually drives LED of $4 \times 4$ matrix. In total, the IC can drive and light up 16 LED. In this specification, LED's number controlled by each pin corresponds as follows.
The internal logic circuit is operated by using an internal clock or the external clock input to the terminal CLKIO.

## OPERATION ( continued )

## 7. Block Configuration of Matrix LED (continued)

### 7.2 Driver Configuration

- Actual driver configuration is shown in the following figure.
- The anodes and cathode of each LED are connected to different $Z$ pin as shown in figure below.
- Z5 pin consists of only Current Sink and Slope control timing driver. Thus, LED anode are not to be connected to $Z 5$ pin.
- Please do not remove any of the LED inside the matrix if it is not used. If LED are to be removed, it is advised to remove the entire row (e.g: all LED in row $A$ ) instead of removing only 1 LED. If only one LED in the row is removed instead of the whole row, user needs to avoid using LED whose reverse breakdown voltage is lower than the operating VCC level.
- Internal control logic according to user register settings is used to control Y1 to Y4CNT(PMOS ON/Off Scan Switches) as well as X 1 to X5CNT (Current sink value as well as PWM/Slope timing for lighting effects)

### 7.3 Timing Chart when in operation

- The figure below shows a timing chart when in operation.
- Timing can be controlled according to the external clock frequency input to CLKIO pin.
- In default condition, it is controlled by internal 2.4 MHz clock.
- Y1 to Y4CNT are scan timing which is turned on one at a time. The ON period of each pin is constant 255 clks $(106.08 \mu \mathrm{~s})$ and includes the interval of $4 \mathrm{clks}(1.664 \mu \mathrm{~s})$.
- 16 LED ( $4 \times 4$ matrix) are controlled by X1 to X5CNT according to below figure.
- When $Y^{*} C N T=$ "High", $X^{*}$ CNT = "Low", the actual waveform of $Z^{*}$ is set to $\mathrm{Hi}-\mathrm{Z}$.

- Duty can be set using register DT*[7:0] from registers \#10h to \#1Fh. Additional brightness control is provided through register BRT*[3:0] (registers \#20h to \#2Fh).

Doc No. TA4-EA-05357
Revision. 4

## OPERATION ( continued )

## 8. LED Driver Block Function

Functions Table for LED Driver

| No. | Features | Setting Range |
| :---: | :---: | :---: |
| 1 | Constant current mode | IMAX Setting : 7.5 mA to 60 mA (max) <br> DAC Current Step (Brightness) : 0.5 mA to 4 mA (max) step |
| 2 | PWM mode and Fade-in/out mode | IMAX Setting : 7.5 mA to 60 mA (max) <br> DAC Current Step (Brightness) : 0.5 mA to $4 \mathrm{~mA}(\max )$ step <br> Adjustable detention Time for each step : $(1.72 \mathrm{~ms}$ to $20.7 \mathrm{~ms} /$ step $)$ |
| 3 | Firefly mode | Fixed Current at $100 \%$ Duty IMAX Setting : 7.5 mA to 60 mA (max)  <br> DAC Current Step (Brightness) : 0.5 mA to $4 \mathrm{~mA}(\max )$ step <br> Adjustable detention Time for each step : $(0.22 \mathrm{~s}$ to $2.64 \mathrm{~s} /$ step) |
| 4 | Melody mode | IMAX Setting : 7.5 mA to 60 mA (max) <br> DAC Current Step (Brightness) : 0.5 mA to 4 mA (max) step Each LED can synchronize with Music Input from CLKIO pin |
| 5 | Bar Meter Mode | IMAX Setting : <br> 7.5 mA to $60 \mathrm{~mA}(\max )$ <br> DAC Current Step (Brightness) : <br> 0.5 mA to 4 mA (max) step <br> Group LED can synchronize with Music Input from CLKIO pin <br> Bar Meter Mode has more priority than Melody mode. |

### 8.1 Constant Current Mode

Maximum current setting value can be set up as 60 mA using register IMAX[2:0] (register 05h). Brightness can be set through the register BRT*[3:0] (register \#20h to \#2Fh) for individual LED.

## Example)

E.g. If user sets register IMAX[2:0] (\#05h $)=011$ and $B R T *[3: 0]=1111$, the current will be 30 mA .
E.g. If user sets register IMAX[2:0] $(\# 05 \mathrm{~h})=111$ and $B R T^{*}[3: 0]=1111$, the current will be 60 mA .
E.g. If user sets register IMAX[2:0] $(\# 05 \mathrm{~h})=111$ and $B R T *[3: 0]=0111$, the current will be 28 mA .

Doc No. TA4-EA-05357
Revision. 4

## OPERATION ( continued)

## 8. LED Driver Block Function (continued)

### 8.2 PWM Mode and Fade-in/out Mode

This operation is characterized by PWM signal having variable duty depending on register DT*[7:0] (registers \#10h to \#1Fh). However, any changes in duty is not instantaneous, but rather it will step to the new duty at time determined by register $\operatorname{SDT}^{*}[2: 0]$.

Example)
Case 1: LED*DT(new) > LED*DT(old) (PWM Mode without Fade in/out control)

In Case 1, PWM duty has been changed from low to high duty. But the register SDT*[2:0] setting is [000] indicating that there is no Fade in/out control. Therefore, PWM duty changes instantaneously. Users can see that LED becomes brighter instantaneously once PWM duty has been changed.

Case 2: LED*DT(new) > LED*DT(old) (PWM Mode with Fade in control)

In Case 2, PWM duty has also been changed from low to high duty. Unlike in case 1, the register SDT*[2:0] setting is not [000] in case 2. Therefore, PWM duty has changed according to the register SDT*[2:0] setting. This is called PWM mode with Fade in control. Users can see that LED becomes brighter slowly according to the timing set in register SDT*[2:0].

Doc No. TA4-EA-05357
Revision. 4

## OPERATION (continued)

## 8. LED Driver Block Function (continued)

### 8.2 PWM Mode and Fade-in/out Mode (continued)

Example) (continued)
Case 3: LED*DT (new) < LED*DT (old) (PWM Mode with Fade out control), FADTIM $=[0]$

In Case 3, PWM duty has been changed from high to low duty. Unlike in case 1, the register SDT*[2:0] setting is not [000] in case 3. Therefore, PWM duty has changed according to the register SDT*[2:0] setting. This is called PWM mode with Fade out control. Users can see that LED becomes dimmer slowly according to the timing set in register SDT*[2:0].

Case 4: LED*DT (new) < LED*DT (old) (PWM Mode with Fade out control), FADTIM = [1]

In Case 4, PWM duty has also been changed from high to low duty. Unlike in case 3, the register FADTIM is not [0]. Again, the register SDT*[2:0] setting is also not [000] in case 4. PWM duty has changed according to the register SDT*[2:0] setting. Users can see that LED becomes dimmer slowly. It is slower than Case3 as FADTIM register is high (2 times slower than Case 3 Fade out control).

DT*[7:0] is set through register \#10h to \#1Fh. FADTIM is set through register \#0Fh. SDT*[2:0] is set through register \#20h to \#2Fh.

Doc No. TA4-EA-05357
Revision. 4

## OPERATION ( continued)

## 8. LED Driver Block Function (continued)

### 8.3 Firefly Control

This operation is characterized by PWM signal cycling from minimum to maximum duty and vice versa with auto repeat function at time step determined by register SDT*[2:0]. Unlike PWM Fade in/out mode, firefly is auto repeat and thus creating LED blinking function effect.

## Example)

Example $1:$ SDTH $=00(S D T \times 1)$, SDTL $=00(S D T \times 1), F A D T I M=0$

Example $2:$ SDTH $=00(S D T \times 1)$, SDTL $=00(S D T \times 1)$, FADTIM $=1(S D T \times 2)$

Example $3:$ SDTH $=01($ SDT $\times 0.25)$, SDTL $=11(S D T \times 2), F A D T I M=0$

The SDTH is controlled by SLOPEEXTH[1:0] register, SDTL is controlled by SLOPEEXTL[1:0] register. All these registers, SLOPEEXTH[1:0], SLOPEEXTL[1:0] and FADTIM can be set through register \#0Fh. SDT*[2:0] registers are set individually through register \#20h to \#2Fh. All other combinations of SDTH, SDTL and FADTIM is possible.

Doc No. TA4-EA-05357
Revision. 4

## OPERATION ( continued)

## 8. LED Driver Block Function (continued)

### 8.4 Melody Mode Explanation

Melody mode is to synchronize LED to external music signal. Melody mode can be set through register MLDACT from register 04h. Each of the 16 LED matrix can be individually enabled for external music synchronization through register data (address \#08h to \#09h when register address 04h is set as data 04h).
External Music Signal can be injected from CLKIO pin. CLKIO pin serve as both input and output. CLKIO pin can output internal oscillator frequency by using CLKOUT register (register 04h).

CLKIO pin can be used as input for external signal by using EXTCLK register (register 04h). External clock frequency is typically 2.4 MHz . It is advisable to use external clock frequency from 1.2 MHz to 4.8 MHz .
Please do not set MLDACT, EXTCLK and CLKOUT register to "High" at the same time. In such case, the priority of operation will be EXTCLK then CLKOUT and then Melody Mode will have the least priority.

Case 1: CLKIO as output pin

CLKIO output internal frequency by using CLKOUT register

Case 2 : CLKIO as input for external clock

CLKIO uses as external input by using EXTCLK register

Case 3 : CLKIO as input for music signal during melody mode

CLKIO uses as music input when melody mode is enabled by register MLDACT from register 04h.

Note : If input CLKIO voltage is higher than VDD, there will be back flow current to VDD. It can be calculated as below :

$$
\mathrm{I}_{\text {BackFlow }}=\frac{\left(\mathrm{V}_{\text {CLKIO }}-0.7 \mathrm{~V}-\mathrm{VDD}\right)}{393 \mathrm{k} \Omega}
$$

Note : Cin can be calculated as below : In case of that the applicable music frequency is 20 Hz .

$$
\operatorname{Cin}>=\frac{1}{(20 \mathrm{~Hz}) \times 2 \times 3.14 \times 175 \mathrm{k} \Omega}=45.5 \mathrm{nF}
$$

AN32180A

## OPERATION ( continued)

## 8. LED Driver Block Function (continued)

### 8.4 Melody Mode Explanation (continued)

AC music signal input from CLKIO pin will be compared with internal threshold setting. Based on the comparison of music signal and threshold voltage, PWM driver control will change and control the LED ON/OFF. Therefore, LED light on/off control will synchronize with music tempo while LED brightness will synchronize with music loudness. There are two threshold mode, one is "auto threshold" and the other is "fixed threshold mode".

There are 8 threshold voltage levels in this IC as defined in the register 0Ch (THOLD[7:0]). Auto threshold mode means that the 8 threshold voltages will be scanned automatically from the lowest to highest threshold voltages at a fixed frequency higher than audio frequency. Input music signal will be compared with these scanning threshold voltages to control PWM Driver in order to have music synchronization effects. This mode allows user to easily use music synchronize function without having the trouble of manually setting the detection threshold. When melody mode is enabled, auto threshold mode will be the default mode.

Fixed threshold mode means that the threshold voltage is fixed at one threshold level. It can be set using register OCh (THOLD[7:0]). Input music signal will be compared with this fixed threshold voltage set by the user. During fixed threshold mode, do not set more than 1 register bit to logic "High" value at the same time. If user set more register bits to logic "High" after setting 1 register bit to "High", system will only recognise the first "High" bit threshold that is set. In this mode, user can have the flexibility to configure different threshold voltage levels to achieve the desired LED music synchronizing visual effect according to the system music input level.

It is also advised that AC music signal peak to peak voltage to be at least 0.35 V and not more than 2.8 V .

Example of Fixed threshold mode

## - Brightness Compensation in Melody Mode

Additional brightness compensation in melody mode can be achieved by increasing or decreasing the turning on period of LED. Using brightness compensation register \#OBh, LED turning on period can be controlled and LED can become brighter or dimmer.

This additional brightness compensation will be effective only in auto threshold mode. If fixed threshold mode is used, this register will not be able to control LED brightness.

## OPERATION (continued)

## 8. LED Driver Block Function (continued)

### 8.5 Bar Meter Mode Explanation

Bar Meter Mode operation is another method of external melody mode wherein a group of LEDs are used instead of individual LED. Bar Meter Mode has higher priority than individual LED melody mode.

(A)

(C)

In the above diagram (A), column 1 = group4_0, column 2 = group4_1, column 3 = group4_2 and column 4 = group4_3.
Each group can be enabled through register GRP4_0, 4_1, 4_2, 4_3 (address \#0Ah). The LED in the all groups will be synchronized to threshold signals as follow:

| Threshold Signal | Bar Meter Mode Group LED ON |  |
| :---: | :--- | ---: |
| Threshold 1 | Row's | D |
| Threshold 3 | Row's | C, D |
| Threshold 5 | Row's | B, C, D |
| Threshold 7 | Row's | A, B, C, D |

In the above diagram (B), another pattern of grouping is shown. Column $1 \& 2=$ group8_0 and Column 3 \& 4 = group8_1.
Each group can be enable through register GRP8_0 \& GRP8_1 (address \#0Ah). The LED in the all groups will be synchronized to threshold signals as follow:

| Threshold Signal | Bar Meter Mode Group LED ON |  |
| :---: | ---: | ---: |
| Threshold 1 | LED | D1, D3 |
| Threshold 2 | LED | C1, C3, D1, D3 |
| Threshold 3 | LED | A1, B3, C1, C3, D1, D3 |
| Threshold 4 | LED | D2, D4, A1, A3, B1, B3, C1, C3, D1, D3 |
| Threshold 5 | LED | C2, C4, D2, D4, A1, A3, B1, B3, C1, C3, D1, D3 |
| Threshold 6 | LED | B2, B4, C2, C4, D2, D4, A1, A3, B1, B3, C1, C3, D1, D3 |
| Threshold 7 | LED | LED |
| Threshold 8 | LED A2, A4, B2, B4, C2, C4, D2, D4, A1, A3, B1, B3, C1, C3, D1, D3 |  |

## OPERATION (continued)

## 8. LED Driver Block Function (continued)

### 8.5 Bar Meter Mode Explanation (continued)

In the above diagram (C), another pattern of grouping is shown. The whole $4 \times 4$ matrix is grouped. It can be enable through register GRP_ALL (address \#OAh). The LED in the all groups will be synchronized to threshold signals as follow:

| Threshold Signal | Bar Meter Mode Group LED ON |  |
| :---: | ---: | ---: |
| Threshold 1 | LED | C1, D1 |
| Threshold 2 | LED | C2, D2, A1, B1, C1, D1 |
| Threshold 3 | LED | A2, B2, C2, D2, A1, B1, C1, D1 |
| Threshold 4 | LED | C3, D3, A2, B2, C2, D2, A1, B1, C1, D1 |
| Threshold 5 | LED | A3, B3, C3, D3, A2, B2, C2, D2, A1, B1, C1, D1 |
| Threshold 6 | LED | C4, D4, A3, B3, C3, D3, A2, B2, C2, D2, A1, B1, C1, D1 |
| Threshold 7 | LED | LED A4, B4, C4, D4, A3, B3, C3, D3, A2, B2, C2, D2, A1, B1, C1, D1 |
| Threshold 8 |  |  |

Note : During Bar Meter mode, auto threshold detection should be used. This IC does not support Bar Meter Mode with fixed threshold setting. It is also recommended not to use other modes together with Bar Meter Mode.

## OPERATION ( continued )

## 9. Ghost Image Prevention Function

Ghost images sometimes appear during LED matrix mode operation. Very dim light can appear in some LED even during OFF condition. This is called Ghost Image. In this IC, Ghost Image Prevention Function is included to prevent Ghost Image. Ghost Image Prevention Function can be enabled through register ZPDEN (register 04h).

- Ghost Image Prevention may not remove the ghost image perfectly. It depends on the LED color combination and LED connection method.

During normal operation, ghost discharge signal will be always low. When ghost image prevention function is enabled through register 04 h , ghost discharge signal will turn on for 2 clks cycle during 4 clks dead time between each YCNT. During on period of 2 clks cycle, output $Z$ pin will be forced to half of VCC.

## OPERATION (continued)

## 9. Ghost Image Prevention Function (continued)

To minimize ghost image, it is recommended to use LED with same forward voltage drop in LED panel. If user wants to use LED with different forward voltage drop in LED panel (e.g. RGB LED in LED panel), it is recommended that all the cathodes of LED connected to the same pin must have same forward voltage drop. (i.e. same colour LED sharing the same cathode). A recommended RGB LED connection to minimize ghost image is shown in diagram below.

Example of RGB LED connection

## IMPORTANT NOTICE

1. When using the IC for new models, verify the safety including the long-term reliability for each product.
2. When the application system is designed by using this IC, please confirm the notes in this book.

Please read the notes to descriptions and the usage notes in the book.
3. This IC is neither designed nor intended for use in automotive applications or environments unless the specific product is designated by our company as compliant with the ISO/TS 16949 requirements.
Our company shall not be held responsible for any damage incurred by customers or any third party as a result of or in connection with the IC being used in automotive application, unless our company agrees to such application in this book.
4. Please use this product in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Our company shall not be held responsible for any damage incurred as a result of our IC being used by our customers, not complying with the applicable laws and regulations.

Revision. 4

## USAGE NOTES

1. Pay attention to the direction of IC. When mounting it in the wrong direction onto the PCB (printed-circuit-board), it might emit smoke or ignite.
2. Pay attention in the PCB (printed-circuit-board) pattern layout in order to prevent damage due to short circuit between pins. In addition, refer to the Pin Description for the pin configuration.
3. Perform visual inspection on the PCB before applying power, otherwise damage might happen due to problems such as solder-bridge between the pins of the semiconductor device. Also, perform full technical verification on the assembly quality, because the same damage possibly can happen due to conductive substances, such as solder ball, that adhere to the IC during transportation.
4. Take notice in the use of this product that it might be damaged or occasionally emit smoke when an abnormal state occurs such as output pin-VCC short (Power supply fault), output pin-GND short (Ground fault), or output-to-output-pin short (load short). Safety measures such as installation of fuses are recommended because the extent of the above-mentioned damage and smoke emission will depend on the current capability of the power supply.
5. The protection circuit is for maintaining safety against abnormal operation. Therefore, the protection circuit should not work during normal operation.
Especially for the thermal protection circuit, if the area of safe operation or the absolute maximum rating is momentarily exceeded due to output pin to VCC short (Power supply fault), or output pin to GND short (Ground fault), the IC might be damaged before the thermal protection circuit could operate.
6. Unless specified in the product specifications, make sure that negative voltage or excessive voltage are not applied to the pins because the device might be damaged, which could happen due to negative voltage or excessive voltage generated during the ON and OFF timing when the inductive load of a motor coil or actuator coils of optical pick-up is being driven.
7. The product which has specified ASO (Area of Safe Operation) should be operated in ASO.
8. Verify the risks which might be caused by the malfunctions of external components.

## Request for your special attention and precautions in using the technical information and semiconductors described in this book

(1) If any of the products or technical information described in this book is to be exported or provided to non-residents, the laws and regulations of the exporting country, especially, those with regard to security export control, must be observed.
(2) The technical information described in this book is intended only to show the main characteristics and application circuit examples of the products. No license is granted in and to any intellectual property right or other right owned by Panasonic Corporation, Nuvoton Technology Corporation Japan or any other company. Therefore, no responsibility is assumed by our company as to the infringement upon any such right owned by any other company which may arise as a result of the use of technical information de-scribed in this book.
(3) The products described in this book are intended to be used for general applications (such as office equipment, communications equipment, measuring instruments and household appliances), or for specific applications as expressly stated in this book.
Please consult with our sales staff in advance for information on the following applications, moreover please exchange documents separately on terms of use etc.: Special applications (such as for in-vehicle equipment, airplanes, aerospace, automotive equipment, traffic signaling equipment, combustion equipment, medical equipment and safety devices) in which exceptional quality and reliability are required, or if the failure or malfunction of the products may directly jeopardize life or harm the human body.
Unless exchanging documents on terms of use etc. in advance, it is to be understood that our company shall not be held responsible for any damage incurred as a result of or in connection with your using the products described in this book for any special application.
(4) The products and product specifications described in this book are subject to change without notice for modification and/or improvement. At the final stage of your design, purchasing, or use of the products, therefore, ask for the most up-to-date Product Standards in advance to make sure that the latest specifications satisfy your requirements.
(5) When designing your equipment, comply with the range of absolute maximum rating and the guaranteed operating conditions (operating power supply voltage and operating environment etc.). Especially, please be careful not to exceed the range of absolute maximum rating on the transient state, such as power-on, power-off and mode-switching. Otherwise, we will not be liable for any defect which may arise later in your equipment.
Even when the products are used within the guaranteed values, take into the consideration of incidence of break down and failure mode, possible to occur to semiconductor products. Measures on the systems such as redundant design, arresting the spread of fire or preventing glitch are recommended in order to prevent physical injury, fire, social damages, for example, by using the products.
(6) Comply with the instructions for use in order to prevent breakdown and characteristics change due to external factors (ESD, EOS, thermal stress and mechanical stress) at the time of handling, mounting or at customer's process. We do not guarantee quality for disassembled products or the product re-mounted after removing from the mounting board.
When using products for which damp-proof packing is required, satisfy the conditions, such as shelf life and the elapsed time since first opening the packages.
(7) When reselling products described in this book to other companies without our permission and receiving any claim of request from the resale destination, please understand that customers will bear the burden.
(8) This book may be not reprinted or reproduced whether wholly or partially, without the prior written permission of our company.
