

LA9520V

AV Coupler Receiver

Overview

The LA9520V is a receiver IC developed for free-space infrared transmission of stereo audio and video signals. It integrates all the required functions for reception, including I/V conversion for the received signal, a preamplifier, ALC, audio signal demodulation, and video signal demodulation functions, on a single chip. An AV coupler system can be implemented easily using this IC and a transmitter IC (such as the LA9511W or LA9512W).

Functions and Features

[Input Block]

- I/V conversion featuring excellent wideband characteristics
- Preamplifier ALC with wide ALC operating range

[Audio Block]

- Audio demodulator: Built-in 4.3 and 4.8 MHz demodulation circuits.
- Muting function: Mutes the output stage when there is no input signal. The muting function operating level can be adjusted from an input pin.
- Output amplifiers: The right and left levels can be adjusted by applying voltages to input pins. Electronic volume control support.

[Video Block]

- Video demodulator
- Video amplifier: Supports 75 Ω drive. Adjustable output level: supports an electronic volume control.
- Muting function: Mutes the output stage when there is no input signal. The muting function operating level can be adjusted from an input pin.
- Filter: Removes unneeded high-frequency components.

Package Dimensions

unit: mm

3247A-SSOP36

Specifications

Maximum Ratings at Ta = 25°C

Parameter	Symbol	Conditions	Ratings	Unit
Maximum supply voltage	V_{CC} max		6.5	V
Allowable power dissipation	P_d max		550	mW
Operating temperature	T_{opr}		-20 to +70	°C
Storage temperature	T_{stg}		-40 to +150	°C

■ Any and all SANYO products described or contained herein do not have specifications that can handle applications that require extremely high levels of reliability, such as life-support systems, aircraft's control systems, or other applications whose failure can be reasonably expected to result in serious physical and/or material damage. Consult with your SANYO representative nearest you before using any SANYO products described or contained herein in such applications.

■ SANYO assumes no responsibility for equipment failures that result from using products at values that exceed, even momentarily, rated values (such as maximum ratings, operating condition ranges, or other parameters) listed in products specifications of any and all SANYO products described or contained herein.

LA9520V

Operating Conditions at $T_a = 25^\circ\text{C}$

Parameter	Symbol	Conditions	Ratings	Unit
Recommended supply voltage	V_{CC}		5.0	V
Allowable operating voltage range	$V_{CC\text{ opg}}$		4.8 to 6.0	V

Electrical Characteristics at $T_a = 25^\circ\text{C}$, $V_{CC} = 5\text{ V}$

Representative input conditions: Carrier input frequency - Audio left channel: 4.3 MHz

Audio right channel: 4.8 MHz

Video: 11.8 MHz

Audio modulation frequency: $f_m = 400\text{ Hz}$, 1 kHz , modulation $\Delta f = \pm 22.5\text{ kHz}$ (standard), $\pm 75\text{ kHz}$

Video signal input: Modulation of 2 MHz (standard) for a 0.5 Vp-p NTSC composite video signal

With the circuit adjusted to an audio demodulated output of 300 mVrms and a video demodulated output of 1 Vp-p for the above standard input.

Parameter	Symbol	Conditions	Ratings			Unit
			min	typ	max	
Current drain	I_{CC}	No input, $V_{CC} = 5\text{ V}$, Test pins: 3, 7, 2, 5, and 32	45	68	83	mA
[Preamplifier Block] *An unmodulated carrier input is used for preamplifier block testing.						
Preamplifier frequency characteristics	F_{pre}	Pin 9 input. The -3 dB frequency band, $f = 11.8\text{ MHz}$, $V_{IN} = 70\text{ dB}\mu$, Test pin: 31		20		MHz
Input impedance	Z_{in}	Pin 9 internal voltage conversion resistor, Test pin: 9	0.3	0.5	1.0	k Ω
Output level	V_{outpre}	The output level when the AGC is on, $V_{IN} = 100\text{ dB}\mu$, Test pin: 31	0.55	0.9	1.5	Vp-p
Gain (AGC off)	G_{vpre}	$f = 11.8\text{ MHz}$, $V_{IN} = 70\text{ dB}\mu$, Test pin: 31	17	23	29	dB
Harmonic distortion 1	TH1Pre	The second harmonic of 12.5 MHz, $V_{IN} = 100\text{ dB}\mu$, Test pin: 31		-40		dB
[Video Block]						
Video amplifier gain adjustment voltage	V_{vcont}	Pin 9 input. For a 2 MHz modulated input, The voltage such that the pin 1 output level becomes 1 Vp-p, $V_{IN} = 100\text{ dB}\mu$, Test pin: 35	0.05		1.15	Vdc
Demodulator linearity	LINdeomo	Pin 36 input. The conversion voltage ratio linearity at the points $\pm 3.5\text{ MHz}$ from the 12.5 MHz reference. $V_{IN} = 100\text{ dB}\mu$, Test pin: 33	-7	0	+7	%
Demodulator demodulation leakage	V_{leak}	Pin 36 input. The pin 33 leakage when a carrier frequency of 12.5 MHz is applied. $V_{IN} = 100\text{ dB}\mu$, Test pin: 33		-50		dB
Demodulator second harmonic distortion	THD2	Pin 36 input. The second harmonic leakage level when a carrier frequency of 12.5 MHz is applied. $V_{IN} = 100\text{ dB}\mu$, Test pin: 33		-55		dB
Demodulator conversion output	$V_{conv.}$	Pin 36 input. The output value when a 2 MHz modulated waveform is input, $V_{IN} = 100\text{ dB}\mu$, Test pin: 33	0.1	0.23	0.4	Vp-p
Video amplifier gain	G_{Vamp}	Pin 34 input. With a 75 Ω load on pin 1, the total gain after adjusting the output to be 1 Vp-p, $f = 150\text{ kHz}$. $V_{IN} = 0.1\text{ Vp-p}$, Test pin: 1		13		dB
Video harmonic distortion 1	THD1V	The second harmonic of 150 kHz, $V_{IN} = 0.1\text{ Vp-p}$ Test pin: 1		-50		dB
Video harmonic distortion 2	THD2V	The second harmonic of 11 MHz, $V_{IN} = 0.1\text{ Vp-p}$ Test pin: 1		-48		dB
Video driver frequency characteristics	F_{vamp}	The gain ratio for 150 kHz and 5 MHz. $V_{IN} = 0.1\text{ Vp-p}$ Test pin: 1	-6	-3	+3	dB
Driver maximum output voltage	V_{outmax}	$V_{CC} = 5\text{ V}$, the maximum output amplitude with a 75 Ω load. Test pin: 1	1.2	1.5		Vp-p
DC clamp level difference	VCLMP	The difference between the pin 4 and the pin 5 voltages with no input. Test pins: 4 and 5	0.05	0.5		Vdc

Parameter	Symbol	Conditions	Ratings			Unit
			min	typ	max	
[Audio Block] * Audio block initial output is adjusted with the pin 9 input.						
Audio left channel Output adjustment voltage	VacontL	For a 4.3 MHz, $\Delta f = \pm 22.5$ kHz, $f_m = 400$ Hz input, the pin 14 adjustment voltage such that the pin 20 output is 30 mV rms. $V_{IN} = 80$ dB μ , Test pin: 14	0.05		1.15	Vdc
Audio right channel Output adjustment voltage	VacontR	For a 4.8 MHz, $\Delta f = \pm 22.5$ kHz, $f_m = 400$ Hz input, the pin 15 adjustment voltage such that the pin 21 output is 30 mV rms. $V_{IN} = 80$ dB μ , Test pin: 15	0.05		1.15	Vdc
Audio right channel demodulator output	VdemR 75 kHz	After reference output adjustment, the pin 21 demodulator output when the input to pin 26 is 4.8 MHz ± 75 kHz, $f_m = 1$ kHz, $V_{IN} = 80$ dB μ , Test pin: 21	0.6	0.9	1.2	Vrms
Audio left channel demodulator output	VdemL 75 kHz	After reference output adjustment, the pin 20 demodulator output when the input to pin 28 is 4.3 MHz ± 75 kHz, $f_m = 1$ kHz, $V_{IN} = 80$ dB μ , Test pin: 20	0.6	0.9	1.2	Vrms
Audio left channel amplifier output	GvampL	The total amplifier gain (after output level adjustment) from the pin 23 input to the pin 20 output. $V_{IN} = 100$ mVrms, $f = 400$ Hz., Test pin: 20		10		dB
Audio right channel amplifier output	GvampR	The total amplifier gain (after output level adjustment) from the pin 16 input to the pin 21 output. $V_{IN} = 100$ mVrms, $f = 400$ Hz., Test pin: 21		10		dB
Audio amplifier frequency characteristics (L)	FA-AMP L	The frequency characteristics (after output level adjustment) from pin 23 to pin 20. The frequency such that the level is down -3 dB from the output reference at $f = 400$ Hz, Test pin: 20	15			kHz
Audio amplifier frequency characteristics (R)	FA-AMP R	The frequency characteristics (after output level adjustment) from pin 16 to pin 21. The frequency such that the level is down -3 dB from the output reference at $f = 400$ Hz, Test pin: 21	15			kHz
Left channel total harmonic distortion	THDL	The left channel distortion when a 4.3 MHz, $\Delta f = \pm 22.5$ kHz, $f_m = 1$ kHz signal is input to pin 28. $V_{IN} = 80$ dB μ , Test pin: 20		1.0	3	%
Right channel total harmonic distortion	THDR	The right channel distortion when a 4.8 MHz, $\Delta f = \pm 22.5$ kHz, $f_m = 1$ kHz signal is input to pin 26. $V_{IN} = 80$ dB μ , Test pin: 21		1.0	3	%
Left channel output noise voltage	V_{NLch}	With no modulation, the standard output reference signal-to-noise ratio IHFA filter, the LA9520V independent signal-to-noise ratio, $V_{IN} = 80$ dB μ , Test pin: 20	45	55		dB
Right channel output noise voltage	V_{NRch}	With no modulation, the standard output reference signal-to-noise ratio IHFA filter, the LA9520V independent signal-to-noise ratio, $V_{IN} = 80$ dB μ , Test pin: 21	45	55		dB
[Muting Block]						
Audio muting operating input level 1 (Muting level adjustment voltage)	Vmcont1	With no carrier input, the value of the voltage adjusted to mute the audio output. * With an external 30 dB amplifier connected to pin 9. $R_g = 4.7$ k Ω Test pin: 13	0.05		1.05	Vdc
Video muting operating input level 2 (Muting level adjustment voltage)	Vmcont2	With no carrier input, the value of the voltage adjusted to mute the audio output. * With an external 30 dB amplifier connected to pin 9. $R_g = 4.7$ k Ω Test pin: 12	0.05		1.05	Vdc
Muted signal output Low level	VmuteL	The pin 29 output when the muting function is off. Test pin: 29			0.5	Vdc
Muted signal output High level	VmuteH	The pin 29 output when the muting function is on. Test pin: 29	$V_{CC} - 1$			Vdc
Noise detection voltage level	VDET	The pin 11 voltage with no carrier input. With an external 30 dB amplifier connected to pin 9.		3.0		Vdc

Pin Assignment and Block Diagram

Test Circuit Diagram

This circuit diagram is provided for reference purposes. Applications adopting this design may require optimization.

Application Circuit Diagram

This circuit diagram is provided for reference purposes. Applications adopting this design may require optimization.

Connect pins 12 and 13 together if the video and audio systems are to be muted simultaneously.
Only one adjustment is required in this case.

LA9520V

Pin Functions

Pin No.	Pin	Voltage (V)	Function	Equivalent circuit
1	DRIVEOUT	2.1	Video output	<p style="text-align: right;">A13092</p>
2	DRIVEOUT2	2.1	Video output 2	<p style="text-align: right;">A13093</p>
3	DRIVE-V _{CC}	V _{CC}	Driver power supply	
4	CLAMP-OUT	2.7	Sync tip clamp output	<p style="text-align: right;">A13094</p>
5	CLAMP-IN	1.8	Sync tip clamp input	<p style="text-align: right;">A13095</p>
6	DRIVE-GND	0	Driver ground	
7	PRE-V _{CC}	V _{CC}	Preamplifier power supply	
8	PRE-GND	0	Preamplifier ground	
9	PD-IN	1.3	PIN photodiode input The amplifier should have a gain between 30 and 36 dB.	<p style="text-align: right;">A13096</p>
10	AUDIO-REG	1.25	Reference voltage supply bypass capacitor connection	<p style="text-align: right;">A13097</p>
