

Compact and Flexible Solution

TOOLKIT4ACTION INTERFACE MODULE

The Toolkit4Action INterface-Module is a compact and flexible solution for industrial automation. It provides a wide range of digital inputs and outputs, as well as analog inputs and outputs. This allows the Ethernet module to easily connect to a range of industrial equipment and machinery.

The module has a built-in microcontroller that handles communication with external devices and processes the data. This enables data collection and analysis, and control of machines and equipment.

The Toolkit4Action Interface Module module supports multiple communication protocols, including Modbus RTU, Modbus TCP, EtherNet/IP, and Profinet. This makes the module compatible with a range of existing automation systems.

RELIABLE AND SUITABLE FOR ALL CONDITIONS

The module has a rugged and compact housing, making it suitable for use in industrial environments. It also has a number of built-in security features, including overvoltage protection and short-circuit protection, making the module reliable and safe to use.

In summary, the Toolkit4Action Interface Module is a flexible and reliable solution for industrial automation. It provides a wide range of inputs and outputs and supports multiple communication protocols. This makes the module compatible with a range of existing automation systems and it is suitable for use in industrial environments.

OEE SOFTWARE TOOLKIT4ACTION

The OEE software Toolkit4Action for production line monitoring is an essential tool in any production improvement program.

Analyze machine effectiveness within discrete, batch, and continuous production processes. Interpret your losses and start improving production effectiveness for continuous improvement – based on facts and figures. Toolkit4Action is part of the Production4Action and Decide4Action product suite.

KEY BENEFITS

- Real-Time Information
- Enhanced Reports and Analysis
- Browser-Based
- Customizable
- Digital Signage
- Deployment Options
- Flexible
- Growth Path
- Multi-Site Dashboard

WHAT IS DECIDE4ACTION ?

On the surface, DECIDE4ACTION is a suite of software solutions that helps organizations improve performance and maximize productivity. But at its core, it is an integrated decision-making platform...much, much more than just software.

DECIDE4ACTION succeeds where most Business Process Management Software fails. It goes beyond an impressive feature list and a modern user interface and actually gets to the root of the problem: simplifying and automating decision making to streamline business processes and to drive actions.

Three Decades of Proven Results

Because our team has first-hand experience working in engineering and manufacturing environments, we understand exactly what our clients need. And as a result, our software and hardware products have yielded consistent results in a wide range of industries including food & beverage, textiles, and other related manufacturing environments for more than 30 years.
