9. Cautions for use

(1) Soldering

Characteristics may be affected when Solder paste or conductive glue comes in contact with product lid or surface. Please perform reflow temp. profile within 3times.

(2) When using mounting machine

Crystal products are designed to be compatible with automatic mounting. Be sure to have a mounting test in advance by using the actual mounting machine and check that the characteristics of the products are not damaged by the automatic mounting. In the process where the board is warped, such as board separation process, be careful that the warping does not influence the characteristics and soldering of crystal products. Since mounting by Ultrasonic Welding and processing have a possibility of an excessive vibration spreading inside a tuning fork crystal resonator and becoming the cause of characteristic deterioration and not oscillating, it does not recommend. Please repair at +260°C in 10s within hot air.

(3) Conformity of a circuit

We strongly recommend to make sure that Negative resistance (Gain) of IC is designed to be 3 times the ESR (Equivalent Series Resistance) of Crystal unit.

(4) Washing

About use of the washing liquid of a basin system, an alcoholic system, and a chlorofluorocarbon-replacing material system, it is checking that it is satisfactory. However please consult in advance about other washing liquid. Tuning fork crystal resonators should not have ultrasonic washing because their frequency band is close to the washing frequency band of ultrasonic washing machines, very probably causing resonance destruction. To use ultrasonic washing to clean these resonators, tests must be performed in advance under actual application conditions.

(5) Drive Level

The piece of crystal it is processed very smaller than the conventional thing inside DT2012SB series crystal unit may be damaged, if crystal resonators are exposed to an excessively high drive level. Please use the products within the limits specified in the catalogs and specifications.

(6) Handling of a product

DT2012SB series has sufficient intensity to fall and vibration. However, if a crystal product is pressed hard, be sure to check for any damages before using. Crystal resonators should not have pattern to avoid causing base crack.
