SPECIFICATION SHEET NO.	Q0618- 1206B683K251GB
DATE	June 18, 2023
REVISION	A2
DESCRIPTION	Multilayer Ceramic Chip Capacitors, Medium Voltage 1206 (3216 Metric) Series, L3.20mm*W1.60mm, Thickness: 1.80mm Max. Dielectric X7R, Capacitance 0.068μF, Tolerance ±10%, Rated Voltage 250V Operating Temp. Range -55°C ~+125°C Package in Tape/Reel, 2,000pcs/Reel RoHS/RoHS III compliant

MULTILAYER CERAMIC CHIP CAPACITORS 1206 SERIES

MAIN FEATURE

MLCC consists of a conducting material and electrodes. To manufacture a chip-type SMT and achieve miniaturization, high density and high efficiency, ceramic condensers are used. MLCC is made by NP0, X7R, and Y5V dielectric material and which provides medium Voltage product with high electrical precision, stability and reliability.

MAIN FEATURE

- RoHS III Compliant • Wide Operating Temperature Range -55~+125°C • High capacitance and High Voltage in given case size • A wide selection of sizes is available (0603 to 1812) • Capacitor with lead-free termination (pure Tin)

APPLICATION

- DC to DC converter. • High voltage coupling/DC blocking • Back-lighting inverters • Snubbers in high frequency power convertors

MULTILAYER CERAMIC CHIP CAPACITORS 1206 SERIES

RECOMMENDED PROFILE CONDITIONS

PREHEAT:

In order to minimize the risk of thermal shock during soldering, a carefully controlled preheat is required. The rate of preheat should not exceed 4°C per second and the final preheat temperature should be within 100°C of the soldering temperature for small chips such as 0603, 0805 and 1206, within 50°C of the soldering temperature for bigger chips such as 1210 and 1812, etc

SOLDERING

- (1) Use midly activated rosin RA and RMA fluxes do not use activated flux. The amount of solder in each solder joint should be controlled to prevent the damage of chip capacitors caused by the stress between solder, chips, and substrate.
- (2) Hand soldering with temperature-controlled iron not exceeding 30 watts and diameter of tip less than 1.2 mm is recommended, tip of iron should not contact the ceramic body directly, and the temperature of iron should be set to not more than 260°C.
- (3) For bigger chips such as 1210 and 1812, etc. wave soldering and hand soldering are no recommended.
- (4) Refer IPC/JEDEC J-STD-020D Method recommended soldering profiles :
Reflow not sooner than 15 minutes and not longer than 4 hrs after removal from the temperature/humidity chamber, subject the sample to 3 cycle of the appropriate reflow conditions as defined as blow Table description.
- (5) Lead-free : Soldering temperature = 235 to 260°C, depending on product.
- (6) Maximum temperature = Minimum temperature (235°C)+ ΔT + Tolerance for oven process and measurement (5 ~ 7°C)
- (7) Time at peak temperature = 10sec, Dwell above 217°C = 90sec, Ramping rate = 3°C/sec(heating) and 6 °C/sec (heating).

COOLING

After soldering, cool the chips and the substrate gradually to room temperature. Natural cooling in air is recommended to minimize stress in the solder joint. A cooling rate not exceeding 4°C per second should be used when forced cooling is necessary.

CLEANING

All flux residues must be removed by using suitable electronic-grade vapor-cleaning solvents to eliminate contamination that could cause electrolytic surface corrosion. Good results can be obtained by using ultrasonic cleaning of the solvent. The choice of the proper system is depends upon many factors such as component mix, flux, and solder paste and assembly method. The ability of the cleaning system to remove flux residues and contamination from under the chips is very important.

MULTILAYER CERAMIC CHIP CAPACITORS 1206 SERIES

RECOMMENDED PROFILE CONDITIONS

Chip Size	ΔT
0603, 0805, 1206	100 °C
1210, 1812	50 °C

Soldering	Solder Temp.(T_c)	Soldering Time (t_p)
Reflow	235 – 260 °C	< 15 sec.
Wave	230 – 260 °C	< 5 sec.

Profile Feature		Pb-Free Assembly
Preheat /Soak	Temperature Min.(T_{smin})	150°C
	Temperature Max.(T_{smax})	200°C
	Time(t_s) from (T_{smin} ~ T_{smax})	60 to 120 seconds
Ramp-up rate(T_L to T_p)		3 °C/second max.
Liquidous temperature(T_L)		217°C
Time(t_L) maintained above T_L		60 to 150 seconds
Peak package body temperature(T_p)		For user T_p must not exceed the Classification temp 260°C For suppliers T_p must equal or exceed the Classification temp 260°C
Time(T_p)* within 5 of the specified °C classification temperature(T_c)		30* second
Ramp-down rate (T_p to T_L)		6 /second max.
Time 25 to peak temperature 260 °C °C		8 minutes max.

Note: For example, T_c is 260°C and time t_p is 15sec. for user: The peak temperature must not exceed 260°C. The time above 255°C must not exceed 15 seconds.

MULTILAYER CERAMIC CHIP CAPACITORS 1206 SERIES

STORAGE AND HANDLING CONDITIONS

- (1) To store products at 5 to 40°C ambient temperature and 20 to 70% related humidity conditions.
- (2) No harmful gases containing sulfuric acid, ammonia, hydrogen sulfide or chlorine. Packaging should not be opened until the capacitors are required for use. If opened, the pack should be re-sealed as soon as is practicable. Taped product should be stored out of direct sunlight, which might promote deterioration in tape or adhesion performance. The capacitors should be used within one year and checked the solderability before use.
- (3) Don't open the tape until the parts are to be used, use the chips within 3 months after the tape is opened.
- (4) For product of high dielectric constant (Class2 & 3, characteristics B/W & Y), the Electro static capacity changes with the passage of time due to the inherent characteristics of ceramic dielectric materials. The changed capacity reverts to nominal at the temperature it reaches during the soldering process.
- (5) HANDLING : Chip capacitors are dense, hard, brittle, and abrasive materials. They are liable to suffer mechanical damage, in the form of cracks or chips. Chip Capacitors should be handled with care to avoid contamination or damage. To use vacuum or plastic tweezers to pick up or plastic tweezers is recommended for manual placement. Tape and reeled packages are suitable for automatic pick and placement machine.

CAUTIONS

- (1) The corrosive gas reacts on the terminal electrodes of capacitors, and results in the poor solder ability. Do not store the capacitors in the ambience of corrosive gas (e.g., hydrogen sulfide, sulfur dioxide, chlorine, ammonia gas etc.)
- (2) In corrosive atmosphere, solder ability might be degraded, and silver migration might occur to cause low reliability.
- (3) Due to the dewing by rapid humidity change, or the photochemical change of the terminal electrode by direct sun light, the solder ability and electrical performance may deteriorate. Do not store capacitors under direct sunlight or dewing condition. To store products on the shelf and avoid exposure to moisture.
