#### **Descriptions**

- 1 AAVID will not guarantee the performance of the products if the application condition falls outside the parameters set forth in the specification.
- 2 A written request should be submitted to AAVID prior to approval if abnormality and deviation from this specification is required.
- 3 Please exercise caution when handling fans. Damage may be caused when pressure is applied to the impeller, or if the fans are handled by the lead wires, or if the fans are hard -dropped onto the production floor.

#### DON'T TOUCH !

#### DON'T PUSH !

- 4 The correct polarity, Positive(+) and Negative(-), has to be clearly identified before connecting the fan to the power. Beware of the right connection as reversed polarity may cause damage since no effective protection can be introduced against such errors.
- 5 Except as pertains to some special designs, any failure and problems regarding safety of the product caused by the introduction of powder, droplets of water or encroachment of insert in the hub are not guaranteed.
- 6 AAVID fans are not suitable where any corrosive fluids are introduced to their environment.
- 7 Not all fans are provided with the Lock Rotor Protection feature. If you impair the rotation of the impeller for the fans that do not have this function, the performance of those fans will lead to failure.
- 8 It is important to consider safety when testing the fans. A suitable fan guard should be fitted to the fan guard against any potential for personal injury.
- 9 Please be cautious when mounting the fan. Incorrect mounting of fans may cause excess resonance, vibration and subsequent noise.
- 10 Please ensure all fans are stored according to the storage temperature limits specified.

  Do not store fans in a high humidity environment. We highly recommend performance testing is conducted before shipping, if the fans have been stored over 6 months.

## **Statement on RoHS Compliance**
