

PIC-WEB-BOX

WEB SERVER TCP-IP DEVELOPMENT BOARD PIC MICROCONTROLLERS WITH UEXT CONNECTOR

PIC-WEB-BOX is a board that adds additional features over the design of the popular OLIMEX PIC-WEB board. PIC-WEB-BOX adds a protective plastic cover and a microSD card connector. The included microSD card provides enough memory space for almost any web content! The board is developed with a custom bootloader in mind. The bootloader would allow programming via a web interface. After the bootloader project is finished it would be implemented in the production routine of PIC-WEB-BOX and it would be published in the software section of this page. Until then a PIC compatible programmer/debugger would be required to be able to upload programs to the board.

FEATURES

PIC18F67J60 microcontroller

Convinient plastic box that provides protection and aesthetic look

MicroSD card connector and 2GB microSD card

Ethernet connector and functionality

Mini ICSP/ICD connector for programming with PIC-compatible tool (like PIC-KIT3)

Reset button

2 user-programmable buttons

User programmable LED

Power LED

Thermistor for temperature monitoring

RS232 driver and DB9 female connector

UEXT connector

Complete web server and TCP-IP stack support as per

Microchip's open source TCP-IP stack

Custom bootloader that allows programming the board via

Ethernet (not yet available, a work-in-progress)

Power plug-in jack for 9 to 30 VDC power supply

2 extension headers for easier access of microcontroller

Outer dimensions of the board 65x65 mm (2.55"x2.55")

HARDWARE

PIC-WEB-BOX schematic
