### 3 Operating Data

#### 3.1 Electrical Operating Data

Measurement conditions: Normal air density = 1,2 kg/m<sup>3</sup>; Temperature 23°C +/- 3°C; Motor axis horizontal; warm-up time before measuring 5 minutes (unless otherwise specified).

In the intake and outlet area should not be any solid obstruction within 0,5 m.

$\Delta p = 0$ : corresp. to free air flow (see chapter aerodynamics)

I: corresp. to arithm. mean current value

#### Operating requires additional control electronics!

Values measured with control electronics "Powermodul RV45(9920640004)"

#### Attention:

It is not allowed to exceed the max. speed of 50,000 rpm.

The RMS current shall not be higher than 3 A per connector pin.

If  $U_b > U_n = 24$  V, the input power P shall not exceed 43 W.

**Note:** The performance data refers to the blower with control electronics. The control electronics are sensorless, block commuted and have an efficiency of approx. 95%. The ignition angle of the control electronics influences the efficiency of the blower.

Motor data at  $T_a = 25^\circ\text{C}$ :

Pole pair number  $2p = 1$

Winding connection: Y

Winding resistance  $R_{UV} = 1.7$  Ohm

Max. Motor inductance  $L_{UV\_max} = 460$   $\mu\text{H}$

Min. Motor inductance  $L_{UV\_min} = 335$   $\mu\text{H}$

Voltage constant  $k_e = 1920$   $\text{min}^{-1}/\text{V}$

$k_e = 4.54$  mVs/rad

Total harmonic distortion = 4%

3.2 Aerodynamics

Measurement conditions: Measured with a double chamber intake rig.  
Normal air density = 1,2 kg/m<sup>3</sup>; Temperature 23°C +/- 3°C;  
In the intake and outlet area should not be any solid obstruction within 0,5 m. Motor shaft horizontal.  
The information is only valid under the specified test conditions and may be changed by the installation conditions. If there are deviations from the standard test conditions, the characteristic values must be checked under the installed conditions.

a) Operation condition:

—  
—

Speed: 39.200 1/min at free air flow

Max. free-air flow ( $\Delta p = 0 / \dot{V} = \text{max.}$ )	438 l/min	
Max. static pressure ( $\Delta p = \text{max.} / \dot{V} = 0$ )	4.820 Pa	

### 3.3 Sound Data

b) Operation condition:

Inlet noise @ 1,000 Pa. The blower lays on a 10 cm thick foam, inlet pointing upwards, outlet connected to a hose with normed 4 mm nozzle (acoustically insulated), microphone located 1.0 m above, room noise level < 26 dB(A)

Sound pressure level measurement $L_{PA}$ Inlet noise	51,5 dB(A)
