

SKY67177-11: 2.3 to 5 GHz High Gain, Low Noise Amplifier with Bypass

Applications

- 4G LTE and 5G NR base stations
- Massive MIMO active antenna array
- Receive LNA for micro-cell, macro-cell and massive MIMO base stations
- Land mobile radios and military communications

Features

- Gain 34 dB @ 3.8 GHz
- Low noise figure 0.7 dB @ 3.8 GHz
- High IP3 performance:
 - IIP3 = -2 dBm @ 3.8 GHz, high gain mode
 - IIP3 = +13 dBm @ 3.8 GHz, bypass mode
- Low current
- Temperature and process-stable active bias up to +115 °C
- QFN (16-pin 3 x 3 mm) package (MSL1 @ 260 °C per JEDEC J-STD-020)

Skyworks Green™ products are compliant with all applicable legislation and are halogen-free. For additional information, refer to *Skyworks Definition of Green™*, document number SQ04-0074.

Figure 1. Block Diagram

Description

The SKY67177-11 is a high gain low-noise amplifier with second stage bypass and exceptional linearity.

The compact 3 x 3 mm, 16-pin QFN package LNA is designed for 4G LTE and 5G NR base stations operating from 2.3 to 5 GHz.

The internal active bias circuitry provides stable performance over temperature and process variation.

A functional block diagram is shown in Figure 1. The pin configuration and package are shown in Figure 2. Signal pin assignments and functional pin descriptions are provided in Table 1.

Table 1. Signal Descriptions

Pin	Name	Description	Pin	Name	Description
1	GND	Ground	9	IBIAS2	Stage 2 amplifier current set
2	RF_IN	RF input	10	GND	Ground
3	GND	RF/DC ground	11	RF_OUT	RF output port
4	VDD_ANLG	+5 V analog control voltage supply	12	GND	Ground
5	ENB	Amplifier enabled or disabled mode of operation	13	VDD2	+5 V Stage 2 amplifier bias voltage supply
6	IBIAS1	Stage 1 amplifier current set	14	GND	Ground
7	GND	Ground	15	GND	Ground
8	BYP_CTL	Controls second stage amplifier bypass mode of operation	16	VDD1	+5 V stage 1 amplifier bias voltage supply

Electrical and Mechanical Specifications

The absolute maximum ratings of the SKY67177-11 are provided in Table 2. Electrical specifications are provided in Table 3.

Table 2. Absolute Maximum Ratings¹

Parameter	Symbol	Minimum	Maximum	Units
Supply voltage	$V_{DD1}, V_{DD2}, V_{DD_ANLG}$	0	5.5	V
Quiescent supply current	I_{DQ}		170	mA
RF CW input power	P_{IN}		19	dBm
RF peak input power, LTE-TDD, @ $T = 105^{\circ}\text{C}$ $P_{avg} = +19\text{ dBm}$, $PAR = 9\text{ dB}$	P_{IN}		28	dBm
Storage temperature	T_{STG}	-40	+150	$^{\circ}\text{C}$
Operating temperature	T_C	-40	+115	$^{\circ}\text{C}$
Junction temperature	T_J		+150	$^{\circ}\text{C}$
Thermal resistance	Θ_{JC}		50	$^{\circ}\text{C/W}$
Electrostatic discharge: Human Body Model Charge Device Model	HBM CDM	1.25 1		KV KV

1. Exposure to maximum rating conditions for extended periods may reduce device reliability. Exceeding any of the limits listed here may result in permanent damage to the device.

ESD Handling: Industry-standard ESD handling precautions must be adhered to at all times to avoid damage to this device.

Table 3. Electrical Specifications for 3.3 to 4.2 GHz Optimized Tuning, BOM2¹
(V_{DD1} = V_{DD2} = V_{DD_ANLG} = 5.0 V, T_c = +25 °C², Characteristic Impedance [Z₀] = 50 Ω, Unless Otherwise Noted)

Switching time	T _s	Settling time 50% DC control signal to 0.2 dB of final RF value		0.8	1	μs

1. Performance is guaranteed only under the conditions listed in this table and is not guaranteed over the full operating or storage temperature ranges. Operation at elevated temperatures may reduce reliability of the device.
2. Production tested at 25 °C. Performance over temperature is verified by characterization from -40 °C to 105 °C and over voltage from 4.75 V to 5.25 V.
3. 200 MHz and 600 MHz specifications would require different external Tune BOM.

Evaluation Board Description

An Evaluation Board is used to test the performance of the SKY67177-11. The evaluation board schematic diagram is shown in Figure 3 and the Bill of Materials (BOM) is provided in Tables 8 to 10.

Operational Application

To bias up the SKY67177-11 perform the following power supply and control signal turn-on sequence:

1. Ground all GND connectors.
2. Set ENB and BYPASS_CTRL to LOW.
3. Apply 5.0 V to VDD1, and VDD2, and VDD_ANLG.
4. Apply RF input signal.

To power down the SKY67177-11 perform the following power supply and control signal turn-off sequence:

1. Turn Off RF Input Signal.
2. Set ENB and BYPASS_CTRL to LOW.
3. Apply 0 V to VDD1, VDD2, and VDD_ANLG.

R2	7.5 k Ω	Panasonic ECG	ERJ-2RKF7501X	0402	Resistor, SMD 7.5 k Ω 1% 1/10 W
R3, R4	499 Ω	Panasonic ECG	ERJ-2RKF4990X	0402	Resistor, SMD 499 Ω 1% 1/10 W
J2, J3	SMA RF connectors	Cinch Connectivity Solutions	R19-070-18-0032210MM	0.062-in. board thickness	SMA connector jack, female socket 50 Ω board edge, end launch solder tab
J4	8 pos header right angle	TE Connectivity	5-103329-8	2.54 mm pitch	Conn header R/A 8 pos 2.54 mm
U1	16-pin QFN	Skyworks Solutions	SKY67177-11	3 mm x 3 mm	2.3 to 5 GHz high gain low-noise amplifier with bypass

Package Dimensions

The package dimensions for the SKY67177-11 are shown in Figure 4. The PCB layout footprint is shown in Figure 5, and tape and reel dimensions are provided in Figure 6.

Package and Handling Information

Since the device package is sensitive to moisture absorption, it is baked and vacuum packed before shipping. Instructions on the shipping container label regarding exposure to moisture after the container seal is broken must be followed. Otherwise, problems related to moisture absorption may occur when the part is subjected to high temperature during solder assembly.

The SKY67177-11 is rated to Moisture Sensitivity Level 1 (MSL1) at 260 °C. It can be used for lead or lead-free soldering. For additional information, refer to the Skyworks Application Note, Solder Reflow Information, document number 200164.

Care must be taken when attaching this product, whether it is done manually or in a production solder reflow environment. Production quantities of this product are shipped in a standard tape and reel format.
