**Important Part Marking Information:**

In the event you are ordering multiple versions of the J308/SST308 series it is very important that you ***keep both groups of parts separate from each other and do not mix.*** Each container/reel/bag of parts is labeled with the complete part number you have ordered. ***The parts are NOT marked with the complete part number. The parts are marked with the SAME part number, and can be easily mixed with the wrong part number in the event proper inventory control procedures are not followed at customer level.*** As a result of our manufacturing flow, the entire wafer may contain more than one part number. The entire wafer is tested to all of the J/SST308 limits. The wafer is sent out for assembly where the parts are marked prior to test. At test, the parts are separated into the individual part numbers then labeled and placed into inventory. Due to the space restrictions on the number of digits we can print on the different package types, and our inability to remark the parts after test limit our ability mark individual or complete part numbers.

**Device Marking Prior to Date Code 0900:**

Prior to date code 0900, there were different device markings which may have been used. We are now standardizing our part markings to avoid confusion at the customer level. All of the part markings listed in this document represents how the devices are currently marked and how they will be marked in the future. Any different markings represent old/past part markings which have been replaced with the part markings as listed below.
