Active Differential Probe

Pomona Model 6731 differential voltage probe allows users to safely make floating high voltage measurements while using general purpose oscilloscopes. Using a built-in differential amplifier, the floating signal is converted and scaled to a low-voltage signal referenced to earth ground. The probe can be used on circuits associated with electronic high-power converters, motor speed controls, switching mode power supplies, and other high voltage circuits requiring isolation.

Features include switchable attenuation, high impedance to ground for both positive and negative side of the balanced input, and maximum differential voltage up to 1000V. The probe input uses shrouded banana test probe tip. The output to the oscilloscope is made with a BNC cable with a safety insulated BNC male connector.

Included with the 6731:

- Large Jaw Alligator clips (one red and one black).
- Pin-Grabber Test Clips (one red and one black).
- 9V Alkaline Battery.

Pomona's JEDEC QFP test clips are designed to fit on surface-mounted plastic and ceramic JEDEC chips. Choose from two clip types designed to give you optimum functionality and ease of use for testing, troubleshooting and custom-design evaluation with logic analyzers and oscilloscopes.

Lead Pitch: 0.025in (0.635mm).

Fig. 1: The basic JEDEC QFP test clip is designed for use on densely-populated boards where space is at a minimum. Leads at the top of the clip are 0.022in x 0.012in (0.56mm x 0.30mm) and are spaced 0.075in (1.9mm) apart.

Fig. 2: Pomona's most popular JEDEC QFP test clip features a large board with 0.025in (0.635mm) pins at 0.100in x 0.100in (2.54mm x 2.54mm) spacing for easy connection to logic analyzers and oscilloscopes. The board is elevated to avoid other board components near the target chip.

With Pomona's SSOP and QSOP test clips, technicians can now access all of the leads on popular low-profile, fine-pitch SSOP and QSOP chips. Each clip has 0.025in (0.635mm) sq. pins at 0.100in x 0.100in (2.54mm x 2.54mm) spacing to allow connections with jumpers or Pomona's flying leads.

Fig. 1: Clip is located and held with a cantilevered plastic guide that holds the ends of the chip under test. Ideal for densely-populated boards, this clip can attach onto a chip that is spaced only 0.050 (1.27mm) away from an adjacent board component.

Fig. 2: Clip features spring-loaded fingers to attach easily and hold firmly onto the ends of the chip. Clip fingers are opened by finger pressure on the upper handles. A clearance of 0.125in (3.17mm) is required at the ends of the chip under test.

Fig. 3: Clip features spring-loaded contact housings that clamp onto the side of the chip body. Gold-plated contacts are individually cantilevered to maintain positive connections. User interface provides 0.025 (0.635mm) sq. pins at 0.10 (2.54mm) centers.

Lead Pitch: 0.025in (0.635mm).

Pomona offers a wide variety of Micro-SMD Grabber® Test Clips for use in testing fine pitch PQFP devices. See SMD/Micro Format Test section for complete selection.
